Chapter 1

Class Index

1.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

Chapter 2

File Index

2.1 File List

Here is a list of all files with brief descriptions:

Chapter 3

Class Documentation

3.1 DoublyLinkedList< T > Class Template Reference

`#include <list.h>`

Public Member Functions

- DoublyLinkedList ()
  Konstruktor domylny.
- ~DoublyLinkedList ()
  Destruktor, czyci pami
- void addToFront (T data)
- void addToBack (T data)
- void addAtIndex (T data, int index)
- void removeFromFront ()
- void removeFromBack ()
- void removeAtIndex (int index)
- void display ()
- void displayReverse ()
- void clear ()
- Iterator< T > begin ()
- Iterator< T > end ()

Private Attributes

- Node< T > * head
- Node< T > * tail
- int size

3.1.1 Constructor & Destructor Documentation

3.1.1.1 DoublyLinkedList()

```
template<typename T>
DoublyLinkedList< T >::DoublyLinkedList ()
```

Konstruktor domylny.

3.1.1.2 ~DoublyLinkedList()

```
template<typename T>
DoublyLinkedList< T >::~DoublyLinkedList ()
```

Destruktor, czyci pami

3.1.2 Member Function Documentation

3.1.2.1 addAtIndex()

```
template<typename T>
void DoublyLinkedList< T >::addAtIndex (
            T data,
            int index)
```

3.1.2.2 addToBack()

```
template<typename T>
void DoublyLinkedList< T >::addToBack (
            T data)
```

3.1.2.3 addToFront()

```
template<typename T>
void DoublyLinkedList< T >::addToFront (
            T data)
```

3.1.2.4 begin()

```
template<typename T>
Iterator< T > DoublyLinkedList< T >::begin ()
```

3.1.2.5 clear()

```
template<typename T>
void DoublyLinkedList< T >::clear ()
```

3.1.2.6 display()

```
template<typename T>
void DoublyLinkedList< T >::display ()
```

3.1.2.7 displayReverse()

```
template<typename T>
void DoublyLinkedList< T >::displayReverse ()
```

3.1.2.8 end()

```
template<typename T>
Iterator< T > DoublyLinkedList< T >::end ()
```

3.1.2.9 removeAtIndex()

```
template<typename T>
void DoublyLinkedList< T >::removeAtIndex (
            int index)
```

3.1.2.10 removeFromBack()

```
template<typename T>
void DoublyLinkedList< T >::removeFromBack ()
```

3.1.2.11 removeFromFront()

```
template<typename T>
void DoublyLinkedList< T >::removeFromFront ()
```

3.1.3 Member Data Documentation

3.1.3.1 head

```
template<typename T>
Node<T>* DoublyLinkedList< T >::head  [private]
```

3.1.3.2 size

```
template<typename T>
int DoublyLinkedList< T >::size  [private]
```

3.1.3.3 tail

```
template<typename T>
Node<T>* DoublyLinkedList< T >::tail  [private]
```

The documentation for this class was generated from the following files:

- list.h
- list.cpp

3.2 Iterator< T > Class Template Reference

`#include <iterator.h>`

Public Member Functions

- Iterator (Node< T > *node)
  Konstruktor iteratora.
- Iterator< T > & next ()
  Przesuwa iterator do nastego elementu.
- Iterator< T > & prev ()
  Przesuwa iterator do poprzedniego elementu.
- T currentItem ()
  Zwraca dane z aktualnego wa.
- bool isDone ()
  Sprawdza, czy iterator zako przechodzenie po licie.

Private Attributes

- Node< T > * currentNode

3.2.1 Constructor & Destructor Documentation

3.2.1.1 Iterator()

```
template<typename T>
Iterator< T >::Iterator (
            Node< T > * node)
```

Konstruktor iteratora.

Parameters

	node	W, na kta wskazywaerator.

3.2.2 Member Function Documentation

3.2.2.1 currentItem()

```
template<typename T>
T Iterator< T >::currentItem ()
```

Zwraca dane z aktualnego wa.

Returns

Dane typu T.

3.2.2.2 isDone()

```
template<typename T>
bool Iterator< T >::isDone ()
```

Sprawdza, czy iterator zako przechodzenie po licie.

Returns

True, jeli iterator wskazuje na nullptr.

3.2.2.3 next()

```
template<typename T>
Iterator< T > & Iterator< T >::next ()
```

Przesuwa iterator do nastego elementu.

Returns

Referencja do iteratora po przesuniu.

3.2.2.4 prev()

```
template<typename T>
Iterator< T > & Iterator< T >::prev ()
```

Przesuwa iterator do poprzedniego elementu.

cd ..

Returns

Referencja do iteratora po przesuniu.

3.2.3 Member Data Documentation

3.2.3.1 currentNode

```
template<typename T>
Node<T>* Iterator< T >::currentNode  [private]
```

The documentation for this class was generated from the following files:

- iterator.h
- iterator.cpp

3.3 ListFactory< T > Class Template Reference

`#include <fabryka.h>`

Static Public Member Functions

- static DoublyLinkedList< T > * createList ()
  Tworzy i zwraca now instancjsty dwukierunkowej.

3.3.1 Member Function Documentation

3.3.1.1 createList()

```
template<typename T>
DoublyLinkedList< T > * ListFactory< T >::createList ()  [static]
```

Tworzy i zwraca now instancjsty dwukierunkowej.

Returns

Wskanik na nowo utworzon listDoxyReturn

The documentation for this class was generated from the following files:

- fabryka.h
- fabryka.cpp

3.4 Node< T > Class Template Reference

`#include <node.h>`

Public Member Functions

- Node (T data)
  Konstruktor tworzcy nowy w.

Public Attributes

- T data
- Node< T > * next
- Node< T > * prev

3.4.1 Constructor & Destructor Documentation

3.4.1.1 Node()

```
template<typename T>
Node< T >::Node (
            T data)  [inline]
```

Konstruktor tworzcy nowy w.

Parameters

	data	Warto przechowania w we.

3.4.2 Member Data Documentation

3.4.2.1 data

```
template<typename T>
T Node< T >::data
```

3.4.2.2 next

```
template<typename T>
Node<T>* Node< T >::next
```

3.4.2.3 prev

```
template<typename T>
Node<T>* Node< T >::prev
```

The documentation for this class was generated from the following file:

- node.h

Chapter 4

File Documentation

4.1 fabryka.cpp File Reference

`#include "fabryka.h"`

4.2 fabryka.cpp

Go to the documentation of this file.

```
00001 // fabryka.cpp
00002 #include "fabryka.h"
00003
00004 template <typename T>
00005 DoublyLinkedList<T>* ListFactory<T>::createList() {
00006     return new DoublyLinkedList<T>();
00007 }
00008
00009 // Jawne utworzenie instancji szablonu
00010 template class ListFactory<int>;
00011 template class ListFactory<double>;
00012 template class ListFactory<char>;
```

4.3 fabryka.h File Reference

Definicja klasy ListFactory, implementujcej wzorzec fabryki.

`#include "list.h"`

Classes

- class ListFactory< T >

4.3.1 Detailed Description

Definicja klasy ListFactory, implementujcej wzorzec fabryki.

4.4 fabryka.h

Go to the documentation of this file.

```
00001 // Fabryka.h
00002 #pragma once
00003 #include "list.h"
```

```
00004
00009
00010 template <typename T>
00011 class ListFactory {
00012 public:
00017     static DoublyLinkedList<T>* createList();
00018 };
```

4.5 iterator.cpp File Reference

```
#include "iterator.h"
```

4.6 iterator.cpp

Go to the documentation of this file.

```
00001 // iterator.cpp
00002 #include "iterator.h"
00003
00004 template <typename T>
00005 Iterator<T>::Iterator(Node<T>* node) : currentNode(node) {}
00006
00007 template <typename T>
00008 Iterator<T>& Iterator<T>::next() {
00009     if (currentNode) {
00010         currentNode = currentNode->next;
00011     }
00012     return *this;
00013 }
00014
00015 template <typename T>
00016 Iterator<T>& Iterator<T>::prev() {
00017     if (currentNode) {
00018         currentNode = currentNode->prev;
00019     }
00020     return *this;
00021 }
00022
00023 template <typename T>
00024 T Iterator<T>::currentItem() {
00025     return currentNode->data;
00026 }
00027
00028 template <typename T>
00029 bool Iterator<T>::isDone() {
00030     return currentNode == nullptr;
00031 }
00032
00033 // Jawne utworzenie instancji szablonu
00034 template class Iterator<int>;
00035 template class Iterator<double>;
00036 template class Iterator<char>;
```

4.7 iterator.h File Reference

Definicja klasy Iterator do przechodzenia po licie.

```
#include "node.h"
```

Classes

- class Iterator< T >

4.7.1 Detailed Description

Definicja klasy Iterator do przechodzenia po licie.

4.8 iterator.h

Go to the documentation of this file.

```
00001 // Iterator.h
00002 #pragma once
00003 #include "node.h"
00004
00009
00010 template <typename T>
